

To feed a global population of 9 billion by 2050, food production will need to increase by 60%

Our current system wastes 1 out of 3 food calories

An American family of 4 ends up throwing away an average of \$1600 annually in food

# WORKING TOGETHER WE CAN HONOR *the* HARVEST

Honoring the harvest is about using food for its highest purpose and moving nutrients through the food system – from people, to animals, and back to the land to grow more food – instead of going to waste in a landfill.

## CAPTURING “UNEATEN” ENERGY

In addition to producing natural fertilizer, anaerobic digesters produce renewable energy from organic waste (a nice way of describing manure along with food and yard waste).

## FEED PEOPLE

**1 IN 6 AMERICANS FACE HUNGER**

The first step is to ensure that nutritious foods are available for all.

## HOMES

Make healthy food choices and find ways to reduce your food waste at [FoodShift.com](http://FoodShift.com)

## BUSINESS

Join national efforts to fight hunger and take the **U.S. Food Waste Challenge**

## FEED ANIMALS

Food companies, retailers and restaurants can partner with dairy farmers to recycle food scraps that are inedible to humans, avoiding landfills or incineration.

## DID YOU KNOW?

The unused citrus pulp from orange juice companies often goes to dairy farms where it is used as a nutritious ingredient in dairy cows' diets.

## FEED THE LAND

Leftover food and food scraps that people and animals cannot eat may be recycled into a natural fertilizer for the land through composting and anaerobic digesters.
